

# DYNAMIC ANALYSIS OF SPACE TETHER MISSIONS

**Volume 126**  
**ADVANCES IN THE ASTRONAUTICAL SCIENCES**

by  
**Eugene M. Levin**

*Published for the American Astronautical Society by  
Univelt, Incorporated, P.O. Box 28130, San Diego, California 92198  
Web Site: <http://www.univelt.com>*

# CONTENTS

Foreword . . . . .	iii
About the Book . . . . .	9
<b>NEW MISSIONS FOR SPACE TETHERS . . . . .</b>	<b>11</b>
<b>1. HARPOONING A COMET</b>	
<i>COMET NUCLEUS SAMPLE RETURN</i> . . . . .	19
Nomenclature . . . . .	20
1.1. Race to Comets and Asteroids . . . . .	21
1.2. Tether-Mediated Sample Retrieval . . . . .	24
1.3. Spacecraft Motion in the Vicinity of the Comet . . . . .	26
1.3.1. <i>Dynamic Models and Equations</i> . . . . .	26
1.3.2. <i>Hovering and Close Approach Trajectories</i> . . . . .	29
1.4. Equations of Tethered Motion . . . . .	34
1.4.1. <i>Equations in a Newtonian Form</i> . . . . .	34
1.4.2. <i>Equations in Minakov's Form</i> . . . . .	36
1.4.3. <i>Equations for the Tangent Orientation Angles</i> . . . . .	39
1.4.4. <i>Calculation of the Tether Tension</i> . . . . .	42
1.4.5. <i>Normalization of the Arclength</i> . . . . .	44
1.5. Tether Deployment . . . . .	45
1.5.1. <i>Tether Tension Range</i> . . . . .	45
1.5.2. <i>Deployment Dynamics</i> . . . . .	47
1.5.3. <i>Energy Considerations</i> . . . . .	49
1.6. Tether Retrieval . . . . .	52
1.6.1. <i>Retrieval Dynamics</i> . . . . .	52
1.6.2. <i>Dynamics of a Capsule Moving Along the Tether</i> . . . . .	55
1.6.3. <i>Other Scenarios</i> . . . . .	58
1.6.4. <i>Tether Safety</i> . . . . .	59
1.7. Conclusions . . . . .	60

**2. SURVIVING IN SPACE**

<i>TETHER PHYSICS AND SURVIVABILITY EXPERIMENT</i>	63
Nomenclature	64
2.1. The Story of Survival	65
2.2. Evolution Model	69
2.2.1. <i>Equations of Motion</i>	69
2.2.2. <i>Internal Friction in the Tether</i>	71
2.2.3. <i>Pendular Motions</i>	72
2.2.4. <i>Forms of Small Oscillations</i>	74
2.2.5. <i>Modal Decomposition</i>	76
2.2.6. <i>Equations of Libration</i>	77
2.2.7. <i>Evolution Equations</i>	78
2.3. Non-Resonant Motions	80
2.4. Resonant Motions	83
2.4.1. <i>Poincare Maps and Resonance Zones</i>	83
2.4.2. <i>Evolution in the Resonance Zone</i>	87
2.5. Deployment Dynamics	91
2.5.1. <i>Deployment and the Resonances</i>	91
2.5.2. <i>Tether Bow During and After Deployment</i>	94
2.6. Thermal Effects	97
2.6.1. <i>Thermal Hysteresis</i>	97
2.6.2. <i>Thermal Cycles and Libration Evolution</i>	99
2.7. Rotation of the End-Bodies	101
2.7.1. <i>Alignment of the Spin Axis</i>	101
2.7.3. <i>Torsional Oscillations</i>	103
2.7.2. <i>Interaction with Transverse Waves in the Tether</i>	104
2.8. Conclusions	105

**3. SAVING A SPACE STATION**

<i>MIR ELECTRODYNAMIC TETHER SYSTEM</i>	107
Nomenclature	108
3.1. Space Station in Trouble	109
3.2. Electrodynamic System Model	112
3.2.1. <i>Equations of Motion</i>	112
3.2.2. <i>Tether Heating</i>	114
3.2.3. <i>Electric Current in the Tether</i>	115
3.2.4. <i>Geomagnetic Field Model</i>	116
3.2.5. <i>Calculating Geomagnetic Field Along the Orbit</i>	118
3.3. Pendular Motions	120
3.3.1. <i>Equations of Pendular Motion</i>	120
3.3.2. <i>Operation Modes</i>	123
3.3.3. <i>System Characteristics</i>	124

<b>3.4. Librational Instability . . . . .</b>	<b>126</b>
3.4.1. <i>Out-of-plane Instability</i> . . . . .	126
3.4.2. <i>In-plane Instability</i> . . . . .	131
<b>3.5. Libration Control . . . . .</b>	<b>132</b>
<b>3.6. Attitude Dynamics of the Space Station . . . . .</b>	<b>134</b>
3.6.1. <i>Equations of Mir's Rotation</i> . . . . .	134
3.6.2. <i>Relative Equilibrium</i> . . . . .	139
3.6.3. <i>Small Oscillations</i> . . . . .	140
<b>3.7. Resonant and Non-Resonant Motions . . . . .</b>	<b>142</b>
3.7.1. <i>Limitations on Tether Libration AMplitudes</i> . . . . .	142
3.7.2. <i>Spectral Analysis of Free Oscillations</i> . . . . .	143
3.7.3. <i>Spectral Analysis of Forced Oscillations</i> . . . . .	145
3.7.4. <i>Non-Resonant Motions</i> . . . . .	147
3.7.5. <i>Resonant Motions</i> . . . . .	148
<b>3.8. Attitude Control . . . . .</b>	<b>151</b>
3.8.1. <i>Gyro-Damping</i> . . . . .	151
3.8.2. <i>Attitude Control with Thrusters</i> . . . . .	154
<b>3.9. Transverse Oscillations of the Tether . . . . .</b>	<b>154</b>
3.9.1. <i>Equations of Transverse Oscillations</i> . . . . .	154
3.9.2. <i>Linear Oscillations</i> . . . . .	157
3.9.3. <i>Modal Decomposition</i> . . . . .	159
3.9.4. <i>The Effect of Transverse Oscillations on Mir's Rotation</i> . . . . .	164
3.9.5. <i>Controlling Transverse Oscillations</i> . . . . .	164
<b>3.10. Torsional Oscillations of the Tether . . . . .</b>	<b>166</b>
3.10.1. <i>Rotation of the End-Body</i> . . . . .	166
3.10.2. <i>Equations of Torsional Motion</i> . . . . .	168
3.10.3. <i>Torsional Eignefrequencies</i> . . . . .	169
3.10.4. <i>Evolution of Motion</i> . . . . .	170
3.10.5. <i>Thermal Effects</i> . . . . .	171
<b>3.11. Longitudinal Damper . . . . .</b>	<b>173</b>
<b>3.12. Tether State Estimation . . . . .</b>	<b>174</b>
<b>3.13. Conclusions . . . . .</b>	<b>179</b>
 <b>4. GOING FOR A SPIN</b>	
<b>ELECTRODYNAMIC DELIVERY EXPRESS . . . . .</b>	<b>183</b>
Nomenclature . . . . .	184
<b>4.1. Perpetuum Tether Mobile . . . . .</b>	<b>185</b>
<b>4.2. Dynamic Model . . . . .</b>	<b>187</b>
4.2.1. <i>Newtonian Formulation</i> . . . . .	187
4.2.2. <i>Motion of the Center of Mass</i> . . . . .	189
4.2.3. <i>Tether Rotation</i> . . . . .	190
4.2.4. <i>Small Oscillations</i> . . . . .	191
4.2.5. <i>Minakov's Formulation</i> . . . . .	193

4.3.	Operation of a Spinning Tether System . . . . .	196
4.3.1.	<i>Electrodynamic Thrust</i> . . . . .	196
4.3.2.	<i>Magnetic Field Along the Orbit</i> . . . . .	198
4.3.3.	<i>Evolution of the Spin Axis</i> . . . . .	199
4.3.4.	<i>Tether Oscillations and Stability</i> . . . . .	202
4.3.5.	<i>Control of the Spinning Tether System</i> . . . . .	205
4.4.	Orbit Transfers with Spinning Tethers . . . . .	208
4.4.1.	<i>Equations of Orbit Evolution</i> . . . . .	208
4.4.2.	<i>Optimal Current Scheduling</i> . . . . .	209
4.4.3.	<i>Average Performance Characteristics</i> . . . . .	215
4.4.4.	<i>Fastest Orbital Plane Change</i> . . . . .	218
4.4.5.	<i>Orbital Plane Change Assisted by Altitude Change</i> . . . . .	224
4.4.6.	<i>Fastest In-Plane Orbit Transfers</i> . . . . .	226
4.4.7.	<i>Elliptic Orbits with High Apogees</i> . . . . .	230
4.5.	Attitude Motion of the End-Bodies . . . . .	230
4.6.	Conclusions . . . . .	233

## 5. CATCHING A PAYLOAD

<i>MOMENTUM EXCHANGE ELECTRODYNAMIC REBOOST SYSTEM</i> . . . . .		235
	Nomenclature . . . . .	236
5.1.	Electrodynamic Tether Transport . . . . .	237
5.2.	Dynamic Model . . . . .	241
5.2.1.	<i>Equations of Motion</i> . . . . .	241
5.2.2.	<i>Gravitational Field Model</i> . . . . .	242
5.3.	Stationary Rotation . . . . .	245
5.4.	Natural Forms of Oscillations . . . . .	247
5.4.1.	<i>Equations of Small Oscillations</i> . . . . .	247
5.4.2.	<i>The Eigenvalue Problem</i> . . . . .	248
5.4.3.	<i>Eigenforms and Eigenvalues</i> . . . . .	249
5.5.	Decomposition of Motion . . . . .	252
5.5.1.	<i>General Equations</i> . . . . .	252
5.5.2.	<i>Calculation of the Integrals of Tension</i> . . . . .	254
5.5.3.	<i>The Case of a Perfectly Tapered Tether</i> . . . . .	255
5.5.4.	<i>Coupled Longitudinal-Transverse Oscillations</i> . . . . .	257
5.6.	Gravitational Forces . . . . .	258
5.6.1.	<i>Expansion of the Newtonian Term</i> . . . . .	258
5.6.2.	<i>General Power Series Expansion</i> . . . . .	260
5.6.3.	<i>Contribution of the Higher Order Terms</i> . . . . .	261
5.7.	Precision Simulation Model . . . . .	262
5.8.	Minakov's Formulation . . . . .	263
5.8.1.	<i>Equations of Motion in Minakov's Form</i> . . . . .	264
5.8.2.	<i>Boundary Conditions</i> . . . . .	266

5.8.3. <i>Motion of the Center of Mass</i>	. . . . .	267
5.8.4. <i>Quasi-Static Tension</i>	. . . . .	268
5.8.5. <i>Simulation Approach</i>	. . . . .	271
5.9. Resonant Excitation of Oscillations	. . . . .	273
5.10. Non-Gravitational Perturbations	. . . . .	274
5.10.1. <i>Method of Computation</i>	. . . . .	274
5.10.2. <i>Aerodynamic Forces</i>	. . . . .	275
5.10.3. <i>Electrodynamic Forces</i>	. . . . .	275
5.10.4. <i>Solar Radiation Pressure</i>	. . . . .	275
5.10.5. <i>Thermal Expansion of the Tether</i>	. . . . .	276
5.10.6. <i>Creep in the Tether</i>	. . . . .	277
5.10.7. <i>Tether Mass Loss</i>	. . . . .	277
5.11. Estimation and Control Approaches	. . . . .	280
5.12. Conclusions	. . . . .	280

## 6. LISTENING TO THE ECHOES OF THE PAST

<i>SUBMILLIMETER PROBE OF THE EVOLUTION OF COSMIC STRUCTURE</i>	. . . . .	283
Nomenclature	. . . . .	284
6.1. Observatories in Space	. . . . .	285
6.2. Tethered Synthetic Aperture Interferometer	. . . . .	288
6.3. Diamond Shape Configurations	. . . . .	290
6.3.1. <i>Symmetry and Dynamic Balance</i>	. . . . .	290
6.3.2. <i>Synthetic Aperture Coverage</i>	. . . . .	292
6.4. Dynamic Model	. . . . .	295
6.4.1. <i>Equations of Motion</i>	. . . . .	295
6.4.2. <i>Gravitational and Non-Gravitational Forces</i>	. . . . .	297
6.5. Stationary Motions	. . . . .	299
6.5.1. <i>Quasi-Rigid Motions</i>	. . . . .	299
6.5.2. <i>Dynamic Symmetry and Integrals of Motion</i>	. . . . .	300
6.5.3. <i>Tether Tension in Stationary Motion</i>	. . . . .	303
6.6. Periodic Motions	. . . . .	305
6.7. Controlled Motions	. . . . .	307
6.7.1. <i>Tether Tension Control</i>	. . . . .	307
6.7.2. <i>Controlling the Diamond Shape Configuration</i>	. . . . .	309
6.7.3. <i>Changing the Spin Plane</i>	. . . . .	310
6.7.4. <i>Residual Out-of-Plane Oscillations</i>	. . . . .	312
6.7.5. <i>Variable Diamond Shape with Fixed Tether Lengths</i>	. . . . .	313
6.8. Tether Oscillations	. . . . .	314
6.8.1. <i>Tether Design and Thermal Regime</i>	. . . . .	314
6.8.2. <i>Longitudinal Oscillations</i>	. . . . .	315
6.8.3. <i>Transverse Oscillations</i>	. . . . .	315
6.8.4. <i>Torsional Oscillations</i>	. . . . .	317

6.8.5. <i>The Effect of Tether Oscillations on the End-Bodies</i>	. . . . .	318
6.9. Simulation Model	. . . . .	319
6.9.1. <i>Fast and Slow Components of Motion</i>	. . . . .	319
6.9.2. <i>Difficulties of Numeric Integration</i>	. . . . .	320
6.9.3. <i>Relative Motion of the Tether</i>	. . . . .	322
6.9.4. <i>Calculation of Tether Tension</i>	. . . . .	326
6.9.5. <i>Modal Expansion</i>	. . . . .	329
6.9.6. <i>Simulation Approaches</i>	. . . . .	330
6.10. Conclusions	. . . . .	331
<b>7. COLONIZING THE MOON</b>		
<i>LUNAR TRANSPORTATION SYSTEMS</i>	. . . . .	333
Nomenclature	. . . . .	334
7.1. The Earth-Moon Highway	. . . . .	335
7.2. Lunar Space Elevator Revisited	. . . . .	337
7.2.1. <i>Transfer Trajectories to the Lunar Elevator</i>	. . . . .	337
7.2.2. <i>Equations of Motion and Relative Equilibrium</i>	. . . . .	340
7.2.3. <i>Characteristics of Tether Configurations</i>	. . . . .	341
7.2.4. <i>Non-Equatorial Configurations</i>	. . . . .	345
7.2.5. <i>Fail-Safe Elevator</i>	. . . . .	348
7.3. Rotating Docking Port on the Moon	. . . . .	349
7.3.1. <i>The Concept</i>	. . . . .	349
7.3.2. <i>Dynamic Features of the Rotating Port</i>	. . . . .	352
7.4. Conclusions	. . . . .	356
<b>8. FLYING IN FORMATION</b>		
<i>TRIANGULAR FORMATIONS OF TETHERED SATELLITES</i>	. . . . .	359
Nomenclature	. . . . .	360
8.1. Constellations, Clusters, and Formations	. . . . .	361
8.2. Triangular Tethered Formations	. . . . .	365
8.2.1. <i>Dynamic Model</i>	. . . . .	365
8.2.2. <i>Quasi-Rigid Rotation</i>	. . . . .	368
8.2.3. <i>Tether Tension</i>	. . . . .	369
8.2.4. <i>Symmetrical Formations</i>	. . . . .	370
8.3. Rotation and Precession	. . . . .	372
8.3.1. <i>Spin Stabilization</i>	. . . . .	372
8.3.2. <i>Precession of the Spin Axis</i>	. . . . .	376
8.3.3. <i>Conical Precession</i>	. . . . .	378
8.3.4. <i>Tidal Evolution</i>	. . . . .	383
8.4. Electrodynamic Control	. . . . .	386
8.4.1. <i>The effect of Ampere Forces</i>	. . . . .	386
8.4.2. <i>Optimal Thrust</i>	. . . . .	389
8.4.3. <i>Electromagnetic Torque</i>	. . . . .	392

8.5. Tether Oscillations . . . . .	395
8.6. Tetrahedron Formations . . . . .	399
8.7. Conclusions . . . . .	400
<b>9. SETTING SAIL</b>	
<i>ELECTRODYNAMIC SAIL CONCEPT</i> . . . . .	403
Nomenclature . . . . .	404
9.1. Large Space Structures . . . . .	405
9.2. Electrodynamic Sail . . . . .	408
9.3. Sail Dynamics and Control . . . . .	411
9.3.1. <i>Orbital Motion and Quasi-Rigid Rotation</i> . . . . .	411
9.3.2. <i>Electrodynamic Thrust</i> . . . . .	413
9.3.3. <i>Electrodynamic Torque</i> . . . . .	414
9.3.4. <i>Modelling Sail Deformations</i> . . . . .	416
9.3.5. <i>Performance Characteristics</i> . . . . .	418
9.3.6. <i>Rendezvous with a Spinning Sail</i> . . . . .	420
9.4. Conclusions . . . . .	421
References . . . . .	425
Subject Index . . . . .	449
List of Tables . . . . .	453
